The Civil War – A “High-Tech” War for Its Time

Lesson Plan by Michelle Loughran

Overview:

This lesson focuses on the technological advances during the time of the Civil War. Through the use of primary sources, students will investigate how technological advancements of the time period were used during the war.

Goal:

The students will become familiar with primary sources and gain an understanding of the ways in which advancements in technology and engineering were used during the Civil War by both the Confederacy and the Union. They will investigate how the high-tech initiatives driven by President Lincoln helped the Union, and ultimately helped our nation prosper through innovation and expansion of these inventions.

Objectives:

- Students will understand that they are viewing primary sources.
- Students will analyze and make inferences about the primary source given.
- Students will collaborate in small groups to research the impact that their given piece of technology had on the Civil War.
- Students will share their findings with the class.

Investigative Question:

How were these “high-tech” inventions of the time period used during the Civil War? How did their use at during the war cause further development and expansion of these innovations?

1. Telegraph
2. Railroads
3. Surveillance Balloons
4. Iron-clads
5. High-powered weapons
6. Photography
7. Submarines

Time Required:

Three 60 minute class periods for introduction of lesson, research, and groups to report out what they've learned. Research would span over the two days. Groups and topics assigned to each group will have been done ahead of these class periods.

First day - Introduction of lesson, primary source evaluation, and beginning of research

Second day – Finish research

Third day - groups report out their findings, and evaluate

Recommended Grade Range:

Grade 4-6

My lesson was taught to a 5th grade class during their curriculum unit on the Civil War within their social studies and language arts block of time.

Subject / Sub-Subject: Library/Technology - Social Studies/Civil War

Standards:**Illinois Social Studies Standards –****Apply the skills of historical analysis and interpretation.**

SS 16.A.2c Ask questions and seek answers by collecting and analyzing data from historic documents, images and other literary and non-literary sources.

Understand Illinois, United States and world environmental history.

SS 16.E.2b (W) Identify individuals and their inventions (e.g., Watt/steam engine, Nobel/TNT, Edison/electric light) which influenced world environmental history.

Common Core ELA Standards –

CC.5.W.7 Research to Build and Present Knowledge: Conduct short research projects that use several sources to build knowledge through investigation of different aspects of a topic.

CC.5.SL.1 Comprehension and Collaboration: Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 5 topics and texts, building on others' ideas and expressing their own clearly.

PREPARATION:

Materials Used:

- [Teacher's Guide to Analyzing Photographs & Prints](#)
- Pictures and links for each of the inventions (see below)
- Computers/tablets for student use to research the invention used during the Civil War
- Databases to use to access information, such as World Book Online Encyclopedia or Webpath Express
- Books about the inventions or excerpts from books
- Note-taking research organizer for group to document their findings (see below)
- Evaluation Rubric

Wheeler, Tom. Mr. Lincoln's t-mails: the untold story of how Abraham

Lincoln used the telegraph to win the Civil War. New York: Collins, 2006.

The Visual dictionary of ships and sailing. 1st American ed. London; New York: Kindersley/Houghton Mifflin, 1991.

PROCEDURE

Description of Procedure:

1. **Connect** – Introduce the lesson by discussing with students their current study of the Civil War and how some inventions of that time period were considered “high-tech” and worthy of our investigation because the impact of their use has been far-reaching and continues today.

2. **Wonder** – Display the list of seven inventions that we are going to investigate:
 - Surveillance Balloons
 - Submarines
 - Iron-clads
 - Railroad Locomotives
 - Telegraph
 - High-powered weapons
 - Photography

Explain to students that as we work in groups today and the next day we will look into at least one of these and try to answer the question: How were these “high-tech” inventions used during the Civil War, and did their use at that time cause further development and expansion of these innovations? Students can also formulate their own questions about one or more of these inventions and their use during the Civil War. An organizer with possible questions to research will be given to guide their exploration. Groups of students will have been formed ahead of time based on interest in the invention. Note-taking organizer and rubric will be presented to students so that they are aware of the expectations and can ask any questions.

3. **Investigate** – Students will be given an example of a primary source and together we will look at the Primary Source Analysis for Photographs and Prints. Then they will complete an analysis of a photo on one of the inventions that I have preselected for each of the groups. Students will also be given any books or excerpts about their invention to use for research. They will also be directed to use the databases on the computers/tablets that we have to find out all that they can about the invention and

how it was used during the Civil War. Students will be given a note-taking organizer to document their findings. Students will then work in groups to work on the task.

4. **Construct** – In their groups students will draw conclusions about the invention and its usefulness during the Civil War, how it became so, and if it's still useful today. They will prepare to present their findings in a quick share with the whole class.
5. **Express** – Students will present their findings to the rest of the class that should generate further discussion.
6. **Reflect** – The rubric for the lesson will be given to groups of students to self-evaluate this project. The teachers will also evaluate using the same rubric based on observations throughout the project. Students will be encouraged to ask further questions about their research, take on one of the other inventions for further investigation.

Extensions:

If interest and time allows, groups could take a different invention/primary source to investigate further.

Evaluation:

Students will self-evaluate their work and collaborative group skills using a rubric provided to them. The classroom teacher and LMC director will also evaluate each group using the same rubric.

Group Member Names:

Date:

Civil War "High-Tech" Invention Research Organizer

What is the name of your "high-tech" invention from the Civil War era?

What are some questions you have about this invention?

What does this invention do and how does it work?

What was the intended purpose for this invention?

How was this used during the Civil War?

Was this invention beneficial to the outcome of the Civil War? How so, if so?

What were the obstacles to using this equipment?

Was there further development of this invention after the Civil War? Did it transform into something else? If so, what?

Is this invention still used today, if so, how so?

What sources did you use to gather this information?

Does your group believe that this invention was helpful to the war? If so, is it still helpful today and did it lead to further innovation?

Civil War "High-Tech" Invention Research Project Rubric

Student Name: _____

**Homeroom
Class:** _____

| CATEGORY | Superior - 4 | Good - 3 | Fair - 2 | Unsatisfactory - 1 |
|--------------------------------------|---|--|--|--|
| Research | Information shows evidence of detailed research and in-depth understanding | Information shows evidence of research and partial understanding. | Information shows evidence of research and understanding but lacks depth in several places. | Information lacks evidence of research or demonstrates an inadequate level of understanding. |
| Resources | Used multiple resources - Books, Internet, Primary Source Analysis Tool | Used some resources but not all - Books, Internet, Primary Source Analysis Tool | Used minimal resources. | Didn't use resources. |
| Use of Class Time | Used time well during each class period. Focused on getting the project done well. Never distracted others. | Used time well during each class period. Usually focused on getting the project done. Never distracted others. | Used some of the time well during the class periods. There was some focus on getting the project done, but occasionally distracted others. | Did not use time well during each class period to focus on the project OR distracted others often. |
| Group Skills | Worked collaboratively with group, each member contributing equally. | Lack of collaboration shown or unequal distribution of work load. | Minimal collaboration skills or unequal distribution of work load. | Inability to collaborate and some group members not contributing. |
| Oral Presentation of Findings | Clear and concise explanation of the invention and the impact on the Civil War. | Findings were presented clearly and concisely with minimal mistakes or inaccuracies. | Unclear explanation of findings. | Presentation of findings is unclear and lacks proper explanation. |

The Civil War – A “High-Tech” War for Its Time
Lesson Reflection
By Michelle Loughran
June 5, 2014

The lesson I delivered for the Level II course on primary sources in the Civil War was well received by the fifth grade students I worked with. Considering it is the end of the school year and they will be leaving elementary school, I was pleased that they were still excited to learn about something slightly different than what they had been studying in social studies about the Civil War. So even though they had built some background knowledge about the Civil War, the material we looked at was new and interesting to them. To take a look at the war through the lens of invention and innovation was something that I had wanted to reinforce in this lesson. While taking the Level II course on primary sources of the Civil War, we had read the book *The Fiery Trial* by Eric Foner. One part that stuck with me from the book was what an innovator and open-minded person that Lincoln was and how things could have been quite different, in many ways, had he not been president. I hoped that my students could take away that aspect of the lesson that I was teaching. Different groups were researching different “high-tech” innovations of the Civil War era. I wanted them to understand that their use during this time period caused further innovation that had a far-reaching impact on our country.

The groups and topics for research had been determined ahead of time which saved a lot of time. Students were given the opportunity to write down their top three topics to study and then groups were formed based on interest. With three people to a group, everyone was able to get one of their choices of the seven topics. It was very important for me to have the students choose their topic because that way they would be more engaged in the research. Many of the students were interested in researching high-powered weapons, not surprising for fifth grade. Ultimately, everyone seemed happy with their groups and topics so I’m glad that we were able to determine that fairly easily ahead of time to make the lesson run smoothly and make the best use of our time in the lab.

The time for the lesson did have to be shortened on the day of the observation because it is the only air conditioned room in the school and with it being so warm; we had to decrease our time due to the increased demand for the space. But we did have a good hour on the first day, and we were able to finish up in the other lab on the subsequent days.

There was some inconsistency with our network earlier in the week, so to avoid the chance that we would lose connectivity, I went ahead and printed the pictures from the Library of Congress website that I wanted the students to use in the lesson. In looking back, I probably gave them too many photos and information at once. When using the Primary Source Photo Analysis Tool, it would have been better for them to only have had one picture in their hands to avoid a bit of confusion as to what to do with it all. Due to the fact that they are younger students, they were unable to handle too much information all at once without losing their attention span, especially at the end of the school year. In the future, I will change that and give them one picture to start with to analyze, then after that activity, follow with the introduction of the

research and disbursing the rest of the photos and articles/books. It's just difficult when you have limited time in a lab and a lot of material to cover. But the time spent changing that one thing would have been worth it.

One other thing I would consider in the future is having the students' research and read about their topic before giving them an organizer to write their questions and answers on. The time spent actually reading and learning would be valuable rather than them just trying to answer the questions and get finished as quickly as possible. It could go either way though. Sometimes without the accountability of the organizer, time could be wasted off task. Something to consider though, based on the make-up of the class and knowledge of the students.

The students were still very engaged during the lesson, even by the second and third day, and learned quite a bit. Many of the groups decided to make short PowerPoints to present their findings with the whole class. They thought that the Library of Congress pictures were so good that they wanted to share some of them with the entire class when they spoke about what they had learned. All in all, they really enjoyed the project and learned quite a bit!
